8	0.152
9	0.150
10	0.148
11	0.145

A scatter plot showing the relationship between Eigenvector 1 (x-axis) and Eigenvector 2 (y-axis) for the variable 'number'. The x-axis ranges from approximately -0.15 to 0.25, and the y-axis ranges from approximately -0.25 to 0.15. Data points are represented by open circles, squares, and triangles. There is a clear negative correlation, with points clustered along a diagonal line from the top-left to the bottom-right. The points are more spread out at higher values of Eigenvector 2 and become more tightly clustered as Eigenvector 2 approaches zero.
